ADAPTIVE TRUST-BASED E-ASSESSMENT SYSTEM for Learning

TeSLA Project is reinventing online assessments. TeSLA allows organizations of all sizes guarantee the authorship and authenticity of any online assessment activity.

TeSLA project is an Innovation Action project funded by the European Commission under the Horizon 2020 framework. The consortium is composed by 18 organizations coming from 12 different European countries.

The innovative solution:

Online learning activities still have a clear dependency associated with face-to-face assessments. Students still need to attend face to face final exams in order to achieve official accreditation and validation.

TeSLA Project focuses on developing an efficient and scalable online evaluation system that is able to provide reliable verification of a student’s identity and authorship. Working both independently and also integrated with existing elearning platforms and technologies.

TeSLA project offers educational institutions an integrated system for effective online assessment and activities verification to ensure identification accuracy in online learning and also in blended environments.

TeSLA’s key benefits include:

- Enhanced scalability for institutions. Now the full student lifecycle can be completed and fully accredited online.
- Protection and including extra security against academic fraud and plagiarism with digital and timestamp certificates.
- Support for new innovative and distributed learning methodologies.
- Technology agnostic solution. TeSLA works standalone or with any LMS that supports LTI standards.
- TeSLA will assure and guarantee the quality of e-assessment processes following the European Standard guidelines defined by Quality Agencies
- Better support for people with disabilities. It is not required anymore to travel to an examination center.
- Best in class experience for students and professors. Without major interference, students can now complete all their learning activities.

"We imagine a future where there would be no doubt about the identity and authorship of work performed and submitted by remote and online students. Leveraging the most innovative technology that is also transparent for both students and institutions."

HOW IT WORKS

A new e-assessment system for your organization

It all starts when the institution chooses to connect or integrate TeSLA within their existing learning environments. There are both LMS plug-ins and standard LTI connectors available.

Professor creates an assessable learning activity. Then he/she decides what level of assurance and security (which instruments) to include for this specific assessment.

ABOUT TeSLA PROJECT

The consortium is composed by Higher Education institutions and research centers in collaboration with technological companies as well as accrediting quality agencies. It is formed by 18 partners: 8 universities, 3 quality agencies, 4 research centers and 3 companies and it is being tested by more than 10k students across Europe.

The consortium includes more than 100 experts that share the same passion for pushing the boundaries of online education as we know it today.

This project has been co-funded by the HORIZON 2020 Programme of the European Union. This publication reflects the views only of the author, and the Commission cannot be held responsible for any use, which may be made of the information contained therein.
